Updating Cloud Volumes ONTAP software

Cloud Manager includes several options that you can use to upgrade to the current Cloud Volumes ONTAP release or to downgrade Cloud Volumes ONTAP to an earlier release. You should prepare Cloud Volumes ONTAP systems before you upgrade or downgrade the software.

Software updates must be completed by Cloud Manager

Upgrades of Cloud Volumes ONTAP must be completed from Cloud Manager. You should not upgrade Cloud Volumes ONTAP by using System Manager or the CLI. Doing so can impact system stability.

Cloud Volumes ONTAP must be registered with NetApp Support

Cloud Volumes ONTAP must be registered with NetApp support in order to upgrade the software using any of the methods described on this page. This applies to both PAYGO and BYOL. You'll need to [manually register PAYGO systems](#), while BYOL systems are registered by default.

A system that isn't registered for support will still receive the software update notifications that appear in Cloud Manager when a new version is available. But you will need to register the system before you can upgrade the software.

Downgrade notes and requirements

- You can start the downgrade process from Cloud Manager, but it almost always requires manual intervention from the CLI.
- In many cases, you might need help from NetApp support to complete the process. So we recommend that you call NetApp support for assistance when downgrading a production Cloud Volumes ONTAP system to an earlier version.
- You can downgrade Cloud Volumes ONTAP but only by one version at a time.

For example, you can downgrade from 9.7 to 9.6, but not from 9.7 to 9.5. So to go from 9.7 to 9.5, you'd need to downgrade from 9.7 to 9.6 and then from 9.6 to 9.5.

Ways to update Cloud Volumes ONTAP

Cloud Manager displays a notification in Cloud Volumes ONTAP working environments when a new version of Cloud Volumes ONTAP is available:

 **cloudvolumesontap1** ■ On | AWS i : x

NOTIFICATIONS
★ New version available ↗

SERVICES

 **Cloud Compliance** ■ On ✓ **No Personal Files Found** :

 **Backup to S3** ■ On **3** **Volumes Backed Up** :

You can start the upgrade process from this notification, which automates the process by obtaining the software image from an S3 bucket, installing the image, and then restarting the system. For details, see [Upgrading Cloud Volumes ONTAP from Cloud Manager notifications](#).

For HA systems in AWS, Cloud Manager might upgrade the HA mediator as part of the upgrade process.

Advanced options for software updates

Cloud Manager also provides the following advanced options for updating Cloud Volumes ONTAP software with both PAYGO and BYOL:

- Software updates using an image on an external URL

This option is helpful if Cloud Manager cannot access the S3 bucket to upgrade the software, if you were provided with a patch, or if you want to downgrade the software to a specific version.

For details, see [Upgrading or downgrading Cloud Volumes ONTAP by using an HTTP or FTP server](#).

- Software updates using the alternate image on the system

You can use this option to downgrade to the previous version by making the alternate software image the default image. This option is not available for HA pairs.

For details, see [Downgrading Cloud Volumes ONTAP by using a local image](#).

Preparing to update Cloud Volumes ONTAP software

Before performing an upgrade or downgrade, you must verify that your systems are ready and make any required configuration changes.

- [Understanding supported upgrade and downgrade paths](#)
- [Planning for downtime](#)
- [Verifying that automatic giveback is still enabled](#)
- [Suspending SnapMirror transfers](#)
- [Verifying that aggregates are online](#)

Understanding supported upgrade and downgrade paths

You need to upgrade or downgrade Cloud Volumes ONTAP by one release at a time. You can't upgrade or downgrade by skipping a release.

For example, if you're currently running Cloud Volumes ONTAP 9.6 and you want to upgrade to 9.8, then you first need to upgrade to 9.7. From there, you can upgrade to 9.8.

[Refer to the "Upgrade notes" in the Cloud Volumes ONTAP Release Notes for more details.](#)

Planning for downtime

When you upgrade a single-node system, the upgrade process takes the system offline for up to 25 minutes, during which I/O is interrupted.

Upgrading an HA pair is nondisruptive and I/O is uninterrupted. During this nondisruptive upgrade process, each node is upgraded in tandem to continue serving I/O to clients.

Verifying that automatic giveback is still enabled

Automatic giveback must be enabled on a Cloud Volumes ONTAP HA pair (this is the default setting). If it isn't, then the operation will fail.

[ONTAP 9 Documentation: Commands for configuring automatic giveback](#)

Suspending SnapMirror transfers

If a Cloud Volumes ONTAP system has active SnapMirror relationships, it is best to suspend transfers

before you update the Cloud Volumes ONTAP software. Suspending the transfers prevents SnapMirror failures. You must suspend the transfers from the destination system.

About this task

These steps describe how to use System Manager for version 9.3 and later.

Steps

- 1. [Log in to System Manager](#) from the destination system.
- 2. Click **Protection > Relationships**.
- 3. Select the relationship and click **Operations > Quiesce**.

Verifying that aggregates are online

Aggregates for Cloud Volumes ONTAP must be online before you update the software. Aggregates should be online in most configurations, but if they are not, then you should bring them online.

About this task

These steps describe how to use System Manager for version 9.3 and later.

Steps

- 1. In the working environment, click the menu icon, and then click **Advanced > Advanced allocation**.
- 2. Select an aggregate, click **Info**, and then verify that the state is online.

aggr1

Aggregate Capacity:

88.57 GB

Used Aggregate Capacity:

1.07 GB

Volumes:

2

▼

AWS Disks:

1

▼

State:

online

- 3. If the aggregate is offline, use System Manager to bring the aggregate online:
 - a. [Log in to System Manager](#).

- b. Click **Storage > Aggregates & Disks > Aggregates**.
- c. Select the aggregate, and then click **More Actions > Status > Online**.

Upgrading Cloud Volumes ONTAP from Cloud Manager notifications

Cloud Manager notifies you when a new version of Cloud Volumes ONTAP is available. Click the notification to start the upgrade process.

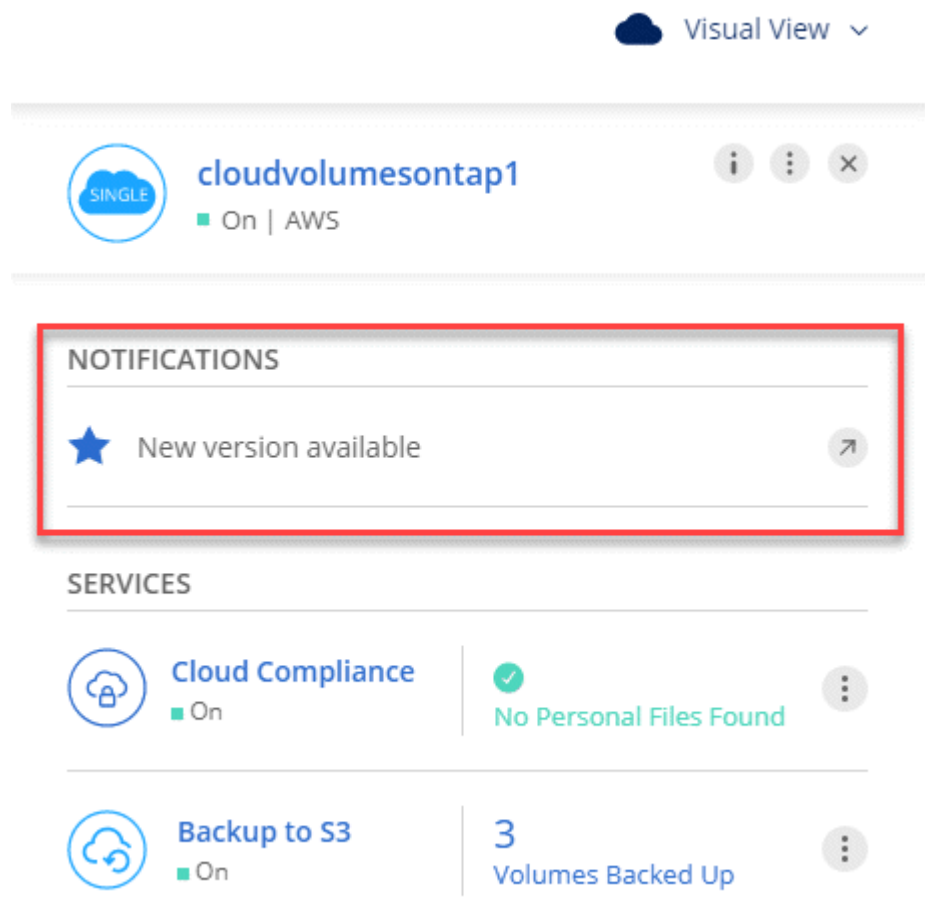

Before you begin

Cloud Manager operations such as volume or aggregate creation must not be in progress for the Cloud Volumes ONTAP system.

Steps

1. Click **Canvas**.
2. Select a working environment.

A notification appears in the right pane if a new version is available:

3. If a new version is available, click **Upgrade**.
4. In the Release Information page, click the link to read the Release Notes for the specified version, and then select the **I have read...** check box.
5. In the End User License Agreement (EULA) page, read the EULA, and then select **I read and approve the EULA**.
6. In the Review and Approve page, read the important notes, select **I understand...**, and then click **Go**.

Result

Cloud Manager starts the software upgrade. You can perform actions on the working environment once the software update is complete.

After you finish

If you suspended SnapMirror transfers, use System Manager to resume the transfers.

Upgrading or downgrading Cloud Volumes ONTAP by using an HTTP or FTP server

You can place the Cloud Volumes ONTAP software image on an HTTP or FTP server and then initiate the software update from Cloud Manager. You might use this option if Cloud Manager cannot access the S3 bucket to upgrade the software or if you want to downgrade the software.

Steps

1. Set up an HTTP server or FTP server that can host the Cloud Volumes ONTAP software image.
2. If you have a VPN connection to the virtual network, you can place the Cloud Volumes ONTAP software image on an HTTP server or FTP server in your own network. Otherwise, you must place the file on an HTTP server or FTP server in the cloud.
3. If you use your own security group for Cloud Volumes ONTAP, ensure that the outbound rules allow HTTP or FTP connections so Cloud Volumes ONTAP can access the software image.

The predefined Cloud Volumes ONTAP security group allows outbound HTTP and FTP connections by default.

4. Obtain the software image from [the NetApp Support Site](#).
5. Copy the software image to the directory on the HTTP or FTP server from which the file will be served.
6. From the working environment in Cloud Manager, click the menu icon, and then click **Advanced > Update Cloud Volumes ONTAP**.
7. On the update software page, choose **Select an image available from a URL**, enter the URL, and then click **Change Image**.

8. Click **Proceed** to confirm.

Result

Cloud Manager starts the software update. You can perform actions on the working environment once the software update is complete.

After you finish

If you suspended SnapMirror transfers, use System Manager to resume the transfers.

Downgrading Cloud Volumes ONTAP by using a local image

Transitioning Cloud Volumes ONTAP to an earlier release in the same release family (for example, 9.5 to 9.4) is referred to as a downgrade. You can downgrade without assistance when downgrading new or test clusters, but you should contact technical support if you want to downgrade a production cluster.

Each Cloud Volumes ONTAP system can hold two software images: the current image that is running, and an alternate image that you can boot. Cloud Manager can change the alternate image to be the default image. You can use this option to downgrade to the previous version of Cloud Volumes ONTAP, if you are experiencing issues with the current image.

About this task

This downgrade process is available for single Cloud Volumes ONTAP systems only. It is not available for HA pairs.

Steps

1. From the working environment, click the menu icon, and then click **Advanced > Update Cloud Volumes ONTAP**.
2. On the update software page, select the alternate image, and then click **Change Image**.
3. Click **Proceed** to confirm.

Result

Cloud Manager starts the software update. You can perform actions on the working environment once the software update is complete.

After you finish

If you suspended SnapMirror transfers, use System Manager to resume the transfers.
